The aviation community in which the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the Civil Air Navigation Services Organization (CANSO) play leading roles is hard at work in bringing aviation into the 21st century. In doing so, the United States and Europe have taken proactive steps forward in introducing modernization, particularly in moving towards more efficient air traffic management systems within NextGen and SESAR. Elsewhere in the fields of personnel licensing, rules of the air, accident investigation and aeronautical charts and information, significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member states self-sufficient in international civil aviation. However, these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air navigation. This book provides that discussion. Some of the subjects discussed in this book are: sovereignty in airspace, flight information and air defence identification zones, rules of the air, personnel licensing, meteorological services, operations of aircraft, air traffic services, accident and incident investigation, aerodromes, efficiency aspects of aviation and environmental protection, aeronautical charts and information, the carriage of dangerous goods and NextGen and SESAR. Except for NextGen and SESAR, these subjects form the titles of the Annexes to the Chicago Convention that particularly involve the rights and liabilities of the key players involved in air navigation.

This book encapsulates in detail the principles pertaining to legal and regulatory aspects of aerodromes as the title denotes. It discusses the various aspects of the structure and functioning of an aerodrome and the complexities involved. It focuses on the law and regulation of aerodrome certification and planning, aerodrome services, financial and economic planning, security management and governance. The airport industry is one of the fastest growing within the aviation industry, requiring innovation and creativity in management. This in turn has called for an

increased focus on advanced management programmes for airport managers and lawyers the airport management professional accreditation programme ampap offered worldwide by the international civil aviation organization and airports council international and the angkasa pura ii airport management excellence programme of indonesia are two such initiatives which give airport professionals a sound grounding on the principles and techniques of management and law

this volume looks at the operational standards and obligations in civil aviation and the consequences of failure to comply with them it covers a wide range of topics both international and complex in measure
